DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20, 24-27, 29-33, and 35-39, drawn to the graphical user interface behavior with multiple cursors, classified in class 345, subclass 754.
- II. Claim 28, drawn to implementation of multiple input devices using a master and slave setup, classified in class 709, subclass 208.
- III. Claims 21-23, 34, and 40, drawn to implementing cursor control and display using three memories, classified in class 345, subclass 157.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the implementation of the cursor input device is not critical to the behavior of the graphical user interface with multiple cursors. The subcombination has separate utility such as controlling multiple cursor devices.
- 3. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the

subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because there are multiple ways to control cursors and invention I only mentions the use of two memories to implement this invention. Invention III specifically claims the use of a third memory to implement multiple cursor devices. The subcombination has separate utility such as controlling multiple cursor devices and the display of these devices in a three memory structure.

4. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as providing an implementation for controlling multiple input devices using master and slave memory means. Invention III only claims using three memories to control multiple input devices. See MPEP § 806.05(d).

Inquiries

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jordan S Golinkoff whose telephone number is 703-305-8771. The examiner can normally be reached on Monday through Thursday from 8:30 a.m. to 6:00 p.m. and alternate Fridays.
